1. (12%, 8%)

(a) Which functions satisfy the wave equations? Check by explicit differentiation.

(b) Show that  $f_5(z, t) = A \cos(bz) \cos(bvt)$  satisfies the wave equation, and express it as the sum of two traveling waves.

(a) Show that the skin depth in a poor conductor ( $\sigma \ll \omega\epsilon$ ) is  $(2/\sigma)\sqrt{\epsilon/\mu}$  and in a good conductor  $\sigma \gg \omega\epsilon$  is  $\lambda/2\pi$ .

$$E_y = \frac{i\omega\mu a}{\pi} B_0 \sin(\pi x/a) e^{i(kz-\omega t)}$$
