Abstract	1
Acknowledgements	2
1. Introduction	
1.1 Background and Motivation	7
1.2 Literature Survey on Bubble Separators	10
1.3 Objectives	15
2. Design Concept and Theory Background	
2.1 Effect of Miniaturization on Force	16
2.2 Surface Tension Theory and Contact Angle	17
2.3 Young-Laplace Equation	18
3. Design and Fabrication of Bubble Separator	
3.1 Bubble Separator Design	21
3.2 Fabrication Process	23
4. Experimental Results and Discussion	
4.1 Preliminary Experimental Method	28
4.2 Experimental Results for Bubble Separator	30
4.3 Discussion	36
5. Conclusions and Future Work	38

List of Figures

Fig. 1.1 DMFC system sketch [2]	9
Fig. 1.2 Sequential pictures of the gas bubble filter in operation actuated by the nozzle-diffuser bubble pump: [7]	10
(a) gas bubble reaching the filter;	
(b) bubble filtered into the gas bubble channel;	
(c) bubble separation from liquid outlet	
Fig. 1.3 Breathing mechanism [8]	12
Fig. 1.4 Experiment result of the breathing process [8]	12
Fig. 1.5 The separator for μ DMFC [9,10]	13
Fig. 1.6 SEM pictures of porous membranes' surfaces [9]	13
Fig. 1.7 The separator for μ DMFC [10,11]	14
Fig. 2.1 The relation of line, surface, and volume force [11]	16
Fig. 2.2 The formation of surface tension [15]	17
Fig. 2.3 The liquid droplet on hydrophobic and hydrophilic plate [16]	18
Fig. 2.4 The balance between surface tension stress and gas pressure	18
Fig. 2.5 (a) A bubble in a liquid with a contact angle θ (b) A bubble in a liquid on the hole with a contact angle θ ...	20
Fig. 3.1 The separator designation for μ DMFC	22
Fig. 3.2 Fabrication Process	27
Fig. 4.1 (a) Pre-test sample structure—microchannel with different width	

(b) parameters: W_g -- the width of gas microchannel	
W_l – the width of liquid microchannel	
W_w —the thickness of wall	29
Fig. 4.2 Experimental equipment setup for bubble separation	31
Fig. 4.3 Bubbles on the bubble separator plate.	
(a) Bubbles randomly distributed and could not be exhausted through hydrophilic hole arrays.	
(b) bubbles captured and partially exhausted on hydrophobic hole arrays.	32
Fig. 4.4 The microchannel structure on the separator	33
Fig. 4.5 Sucking of liquid in the liquid microchannels	33
Fig. 4.6 Single CO_2 bubble separated from the liquid and breathed out after in 28 seconds.	34
Fig. 4.7 (a) A bubble captured by the gas microchannels.	
(b)~(f) The bubble exhausted from two gas microchannels	
(g) The bubble breathed out completely.	35
